

1. User Authentication Module

Features:

Login and Logout functionality

Role-based access (Admin, Registrar, Student)

Account management

Tasks:

- Design login interface

- Implement authentication system

- Setup user roles and permissions

- Create user database

2. Student Records Management

Features:

Add, update, delete student records (Admin/Registrar)

Store academic and personal information

Search and filter records

Tasks:

- Design student records database

- Implement CRUD operations

- Build search and filtering

- Create record management UI

3. Student Information Editing

Features:

Students can directly edit their personal information (limited fields only)

Changes are saved but subject to verification

Track edited data before approval

Tasks:

- Create editable profile interface for students

- Restrict editable fields (e.g., address, contact info)

- Save changes temporarily (pending state)

- Store original vs updated data

4. Verification and Approval Module

Features:

Registrar reviews student-submitted changes

Approve or reject modifications

Apply approved changes to official records

Tasks:

- Build comparison view (old vs new data)

- Implement approve/reject functionality
- Update database after approval
- Store history of changes

5. Audit Trail / Logs Module

Features:

Track all changes made by students

Record who edited, what was changed, and when

Maintain data integrity

Tasks:

- Create audit log table
- Record every modification
- Display logs for admin/registrar

6. Dashboard System

Features:

Overview of system activity

Pending changes for approval

Summary of records

Tasks:

- Design dashboard UI
- Display pending edits
- Connect real-time data

7. Database Management

Features:

Centralized and secure database

Separation of official and pending data

Tasks:

- Design ERD
- Normalize tables
- Implement database structure

8. User Interface (UI/UX)

Features:

Clean and user-friendly design

Easy navigation for students and registrar

Tasks:

- Design forms and layout
- Improve usability

- Ensure responsive design

9. System Testing

Features:

Ensure system accuracy and reliability

Tasks:

- Unit testing

- Integration testing

- Debugging
